Continuation of 3. NOTE: The amendment to claim 1 presents limitations not previously considered, at least with respect to the dependent claims. While claim 1 may incorporate limitations from claim 23, claim 3, for example, did not previously incorporate the limitations of claim 23 and so the amendment to claim 1 raises new issues regarding claim 3 as to whether the claim is patentable over the prior art. Moreover, the amendment to claim 3 per se raises new issues, since the claimed shapes were not previously recited. Further regarding claim 1, it is not clear how a single pair of electrodes can be "selected symmetrically in relation to axes of symmetry," since the axes of symmetry appear to be defined in terms of a plurality of pairs of electrodes. Regarding claim 31, the description of linearization in paragraph 53 of the specification does not adequately teach how to linearize the output.
